Hero Details (route="/heroes/details/(name)") (logged in user)

Hero details after we buy items.

1. Functional Requirements

The **Functionality Requirements** describe the functionality that the **Application** must support.

The **application** should provide **Guest** (not logged in) users with the functionality to:

- **Login**
- **Register**
- **View the Index** page.

The **application** should provide **Users** (logged in) with the functionality to:

- **Logout**
- **Home**
- **Create Hero**
- **Create Item**
- **Profile**
- **Hero Details**
- **Merchant**

The **application** should **store** its **data** into a **MySQL** database, using **Hibernate** native.

User can have can only one Hero. When user has created a hero, he can access Merchant and Profile functionality.

On profile page you should see User – username and email, Hero – name, level and gender(appropriate picture).

After you create a item, it should appear in Merchant page. Each item needs to be shown in table like in the photo.

When hero buys a item it will be added to his inventory. Hero can have only one weapon, helmet, pauldron, gauntlets or pads. After he buys a item, the item buy button should be hidden. When a hero buys a item his stats need to be updated with the item stats.
